

Volunteering & Professional Experience

PT. Delman Data Teknologi - Jakarta, Indonesia (Remote)

Software Engineer (Full Time)

Sept 2024 - Present

- Collaborated with cross-functional teams to resolve data flow and system integration challenges across the DDL core product and internal platforms.
- Developed and maintained the company's main product (DDL), delivering new features and resolving critical frontend and backend issues.
- Utilized AI tools (Cursor, Codex, Open Code, ChatGPT) to improve development productivity and implement AI-assisted workflows, increasing forecasting accuracy by up to 50%.
- Designed and optimized AI chatbot features using prompt engineering and context engineering to improve LLM response quality and consistency.
- Owned full-stack development tasks, including frontend implementation, backend integration, and performance optimization.
- Optimized 10+ API endpoints, reducing latency and improving system efficiency and scalability.
- Enhanced UI/UX by simplifying workflows and improving visual consistency for client-facing applications.
- Maintained and continuously improved web applications and internal platforms, focusing on performance and code quality.

Frontend Engineer (Contract)

Mei 2024 - Aug 2024

- Contributed to the development of 2 projects with clients and was trusted to be one of the frontends who started initializing the project architecture by building it using Next.js, Chakra-ui, React-query, ContextAPI, Docker (containerize docker) and Gitlab for the git repository and communication with team members. Also contribute to communication with clients to discuss the flow of the web app features being built, the objectives of the product or problem to be solved and a mobile-friendly UI display.

Frontend Engineer (Internship)

Oct 2023 - April 2024

- Maintain *cloud.delman.io* Data-Cleaning and Data Visualization as the company's Core Products build using the React Framework Next.js
- Transform Designs into actual products by optimizing code for client-side performance
- Research and implement the latest technologies based on front-end (such as libraries for signatures and other front-end libraries)

Gatherloop.co - Probolinggo, Indonesia

Core Team (Volunteer)

Aug 2023 – Present

- Learning the concept of problem-solving thinking paradigms. In addition, we also focus on developing human resources from people who have a passion in the field of Technology. Currently a coordinator in building the Frontend Probolinggo community with a total of 145 members and every month we hold a tech talk to motivate members and a place to share knowledge.

JA Software Solution LTD - United Kingdom (Remote)

Frontend Engineer (Freelance)

Jan 2023 - April 2023

- Focus on developing cryptocurrency-based Web3 projects, using the latest technology to work on memory optimization in browsers.

Enoram Inc. - Chicago, US (Remote)

Frontend Engineer (Freelance)

Oct 2022 – Des 2022

- Developed and maintained 3+ core company products, including web applications and internal platforms, leveraging modern technologies such as Firebase, React.js, Next.js, and TypeScript, resulting in a 40% increase in application performance.

Ninja Van - Jakarta, Indonesia (Remote)

Frontend Engineer (Internship)

May 2022 - Aug 2022

I got this internship opportunity from participating in the Generasi GIGIH 2.0 by GoTO program. Of the more than 300 people in the Frontend Engineer field, I am the one who is trusted to get an internship at Ninja Van. I got to work on several tasks such as from the display side using Ant Design, forming appropriate payloads on the backend side, and carrying out integration.

- Build internal applications for QA team using NextJS Typescript, React Query, Zustand, Axios, Ant Design.
- Good communication between team members and mentors using google chat, jira, bitbucket, GIT.

YABB / GoTo Impact Foundation - Jakarta, Indonesia (Remote)

Frontend Engineer on Generasi GIGIH 2.0 (Bootcamp IT) | Feb 2022 – Aug 2022

- Learn from basic to advanced to become a Frontend Engineer with instructors from Gojek and Tokopedia.
- Build a clone application from the Spotify API, where we can login to a spotify account, create playlists using React Typescript, Chakra UI, React Redux, React Router, React testing library and hosted on vercel.

Projects and Achievements

Projects :

Website Official Disdukcapil Probolinggo Regency - <https://disdukcapil.probolinggokab.go.id>

Built using Laravel 8, there is an official website display and a CMS Admin to manage content on the website. I am in charge of being a team leader and working on the appearance on the Frontend side.

Personal Website - <https://www.zainal-abidin.my.id>

Building a personal website for branding purposes and a place to practice from the results of exploring frontend technology. built builds Nextjs, typescript, and chakra-ui.

Poptix by Popuni Indonesia - <https://poptix.vercel.app>

Contribute to the development of activity ticket sales applications at Popuni Indonesia. The technology used uses Tamagui, Solito, NextJS, TypeScript, and this project can be cross-platform to mobile applications.

My Day, Paiton Operations and Maintenance Indonesia (POMI) - <http://167.172.71.203>

Building a dashboard web app for the internal CSR team to report on activities. built with Vuejs version 2, and I contributed as well as being the lead for communication between the developer team and the client.

Vanilla SPA - <https://github.com/zaiinhs/vanilla-spa-nodejs>

This is my learning exploration project about the fundamentals of JavaScript, such as how the concept of React works as single-page applications.

Certifications and Courses :

Fundamental JavaScript - justjavascript.com, Problem Solving (Basic) - hackerrank.com, JavaScript Intermediate - skilvul.com, more in [linkedin](#).

Volunteer Work :

@probolinggofrontend, building a Frontend community in Probolinggo with the hope that the IT ecosystem here will be even better.

Awards :

Bank Indonesia Scholarship | Sept 2020 - Feb 2022

I had the opportunity to get a scholarship from Bank Indonesia. There I learned about financial literacy and built the GenBI Malang community.

Education and Certifications

- | | |
|--|------------------|
| • Informatics Engineering, Universitas Nurul Jadid. GPA: 3.88 | 2018–2022 |
| • React & React Native, Hacktiv8 Indonesia. GPA: A - 92.58 | 2021–2022 |

Technologies and Languages

- Languages : JavaScript, Typescript, Python, SQL
- Technologies :
 - Frontend: React.js, Next.js, SPA, React Query, HTML5, CSS3, Chakra UI, Styled Components, Tailwind CSS, Ant Design
 - Backend: Python (FastAPI, Flask), Node.js, RESTful API, Authentication & Authorization
 - Database: PostgreSQL, MySQL, MongoDB
 - Deployment: Firebase, Vercel, Docker
 - AI Tools & AI Engineering: ChatGPT, Cursor AI, Codex AI, Claude Code, OpenAI API, Prompt Engineering, Context Engineering, AI-assisted Development
 - Tools & Others: Git, GitHub, GitLab, Webpack, Figma
- Other : Data structures and algorithms.
